# Algorithm Planning Sheet

Your algorithm may be made up of lots of different elements, so use this sheet like a "pick 'n' mix" and only use the sections relevant for you.

**Aim**

| My algorithm will |
| --- |

**First** *(perhaps there is a welcome message or you need to reset some variables at the start – these will go here)*

| |
| --- |
| |

**Triggers and actions**

| **Trigger** *(something that starts some actions)* | **Action** *(what happens when a trigger is met)* |
| --- | --- |
| *Example: when button A pressed* | *Show heart image* |
| | |
| | |
| | |
| | |

**Other things that happen** *(things like animations in loops etc – use the free box to design these)*

| |
| --- |
| |

Remember you can also use the LED grid planning sheet to design your images
