

# Advanced practise combining datasets in Excel (Answers)

| Worksheet section | Contents                       |
|-------------------|--------------------------------|
| 1                 | Composite key columns          |
| 2                 | Practice joining datasets      |
| 3                 | More practice joining datasets |

## Note for teachers

The datasets needed to answer the questions in this workbook are in the green tabs.  
The datasets created in this workbook as in the yellow tabs.

This lesson has been created by effini in partnership with The Data Lab.

# 1. Composite key columns

## Section 1.1 (Recall)

- 1) Fill in the gap in this definition,

### Composite key:

A combination of two or more columns that can be used to uniquely identify each row in a dataset.

- 2) Looking at the dataset below, why would you need to use a composite key to join onto another dataset?

There is not a single column that allows you to uniquely identify each row in the dataset.

| order_id | product_id | quantity |
|----------|------------|----------|
| 1001     | ABC        | 5        |
| 1001     | DEF        | 1        |
| 1002     | ABC        | 2        |

## Section 1.2 (Apply)

- 3) We are now going to **left join** the populations of Scottish cities following the instructions in the PowerPoint slides 13-15. We will use **town** and **gender** as the composite key columns. The datasets have already been loaded into Power Query.

| town      | gender | under_16 |
|-----------|--------|----------|
| Edinburgh | female | 36343    |
| Edinburgh | male   | 38248    |
| Glasgow   | female | 48895    |
| Glasgow   | male   | 50972    |
| Dundee    | female | 11638    |
| Dundee    | male   | 12201    |
| Aberdeen  | female | 14784    |
| Aberdeen  | male   | 15515    |
| Inverness | female | 4107     |
| Inverness | male   | 4164     |
| Perth     | female | 3786     |
| Perth     | male   | 4029     |

| town      | gender | 16-64  | 65_over |
|-----------|--------|--------|---------|
| Edinburgh | female | 179904 | 42806   |
| Edinburgh | male   | 175379 | 33840   |
| Glasgow   | female | 224936 | 48242   |
| Glasgow   | male   | 222461 | 36844   |
| Dundee    | female | 50440  | 14578   |
| Dundee    | male   | 47993  | 11360   |
| Aberdeen  | female | 67400  | 17130   |
| Aberdeen  | male   | 69914  | 13847   |
| Inverness | female | 15168  | 5164    |
| Inverness | male   | 15160  | 4027    |
| Perth     | female | 14773  | 5399    |
| Perth     | male   | 15093  | 4270    |

A reminder of the steps you need to follow are,

- Open the merge window from the Data ribbon
- Select the datasets from the drop down lists
- Highlight the key columns, (**Ctrl+click to select multiple columns**)
- Choose the join kind
- Expand the column list
- Select the columns from the right hand dataset
- Name the dataset
- Close & Load the dataset back into the Excel workbook

Left dataset: population\_under16

Right dataset: population\_over16

Once you have left joined the datasets, copy and paste the final dataset into the space below.

| town      | gender | under_16 | 16-64  | 65_over |
|-----------|--------|----------|--------|---------|
| Edinburgh | female | 36343    | 179904 | 42806   |
| Edinburgh | male   | 38248    | 175379 | 33840   |
| Glasgow   | female | 48895    | 224936 | 48242   |
| Glasgow   | male   | 50972    | 222461 | 36844   |
| Dundee    | female | 11638    | 50440  | 14578   |
| Dundee    | male   | 12201    | 47993  | 11360   |
| Aberdeen  | female | 14784    | 67400  | 17130   |
| Aberdeen  | male   | 15515    | 69914  | 13847   |
| Inverness | female | 4107     | 15168  | 5164    |
| Inverness | male   | 4164     | 15160  | 4027    |

## 1. Composite key columns

|       |        |      |       |      |
|-------|--------|------|-------|------|
| Perth | female | 3786 | 14773 | 5399 |
| Perth | male   | 4029 | 15093 | 4270 |

- 4) The datasets below show the price and serving size of ice cream. You need to **inner join** the datasets using **brand** and **flavour** as the composite key columns.

| brand           | flavour        | price_£ |
|-----------------|----------------|---------|
| Frosty Delights | Chocolate      | 4.99    |
| Arctic Swirls   | Chocolate      | 3.99    |
| Creamy Cones    | Strawberry     | 4.99    |
| Frozen Bliss    | Vanilla        | 5.49    |
| Scoop Supreme   | Mint chip      | 5.99    |
| Chilly Treats   | Salted Caramel | 4.49    |
| Dreamy Scoops   | Chocolate      | 4.99    |
| Icy Euphoria    | Vanilla        | 5.49    |
| Frosty Delights | Mint chip      | 4.99    |
| Arctic Swirls   | Salted Caramel | 5.99    |
| Creamy Cones    | Chocolate      | 5.49    |
| Frozen Bliss    | Vanilla        | 4.99    |

| brand           | flavour        | serving_size_g |
|-----------------|----------------|----------------|
| Arctic Swirls   | Chocolate      | 100            |
| Arctic Swirls   | Salted Caramel | 95             |
| Chilly Treats   | Salted Caramel | 100            |
| Creamy Cones    | Strawberry     | 115            |
| Creamy Cones    | Chocolate      | 110            |
| Dreamy Scoops   | Chocolate      | 105            |
| Frosty Delights | Chocolate      | 95             |
| Frosty Delights | Mint chip      | 100            |

Left dataset:

Right dataset:

Once you have joined the datasets, copy and paste the final dataset into the space below.

| brand           | flavour        | price_£ | serving_size_g |
|-----------------|----------------|---------|----------------|
| Frosty Delights | Chocolate      | 4.99    | 95             |
| Arctic Swirls   | Chocolate      | 3.99    | 100            |
| Creamy Cones    | Strawberry     | 4.99    | 115            |
| Chilly Treats   | Salted Caramel | 4.49    | 100            |
| Dreamy Scoops   | Chocolate      | 4.99    | 105            |
| Frosty Delights | Mint chip      | 4.99    | 100            |
| Arctic Swirls   | Salted Caramel | 5.99    | 95             |
| Creamy Cones    | Chocolate      | 5.49    | 110            |

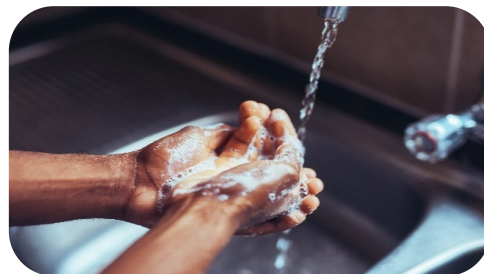

## 2. Practise combining datasets

### Section 2.1 (Apply)

Reducing how much water we all use can save money, as it uses less energy to treat, heat and pump the water. It is also better for the environment as it reduces the demand for the water that wildlife depend on.

But, what is the best way to reduce the amount of water used in a household? We are going to join 2 datasets to help us solve this problem.

Here is a reminder of the stages for joining datasets.

1. What is the **problem** I am trying to answer?
2. Which **datasets** can you use to solve the problem?
3. Which **columns** do I need in my final dataset?
4. Which **type of join** do I need to use?
5. Have I completed the **pre-joining checklist**?

- 1) Choose one of the statements below to describe the problem we are trying to answer?

| Statement  | Yes/No |
|--|--------|
| How much water is there in the <b>world's oceans</b> ?                       | No     |
| Which household activity uses the <b>most water per minute</b> ?             | Yes    |
| On average, how many <b>hours of sunshine</b> per day do we get in Scotland? | No     |

Now we have our problem we are trying to solve, we need to look for datasets that will help us solve the problem.

Already loaded in Power Query we have the following datasets that can help us,

**Dataset 1:** water\_use

**Dataset 2:** activity\_duration

*Note: the datasets have been created by ChatGPT. The values are approximate and can vary depending on factors such as the flow rate and personal habits.*

- 2) Looking at the datasets, which columns from each dataset do we need in our final dataset?

| activity                          | water_use_litres |
|-----------------------------------|------------------|
| Shower (10 minutes)               | 80               |
| Bath                              | 120              |
| Brushing Teeth (With Tap Running) | 5                |
| Brushing Teeth (With Tap Off)     | 0.5              |
| Hand Washing (With Tap Running)   | 5                |
| Hand Washing (With Tap Off)       | 0.5              |
| Dishwashing (Hand)                | 30               |
| Dishwashing (Dishwasher)          | 15               |
| Toilet Flush (Full)               | 6                |
| Toilet Flush (Half)               | 3                |

| activity                          | average_duration_minutes | average_duration_hours |
|-----------------------------------|--------------------------|------------------------|
| Shower (10 minutes)               | 10                       | 0.2                    |
| Bath                              | 30                       | 0.5                    |
| Brushing Teeth (With Tap Running) | 2                        | 0.0                    |
| Brushing Teeth (With Tap Off)     | 2                        | 0.0                    |
| Hand Washing (With Tap Running)   | 2                        | 0.0                    |
| Dishwashing (Hand)                | 30                       | 0.5                    |
| Dishwashing (Dishwasher)          | 60                       | 1.0                    |
| Toilet Flush (Full)               | 1                        | 0.0                    |

| Dataset           | Column                   | Needed? Yes/No |
|-------------------|--------------------------|----------------|
| water_use         | activity                 | Yes            |
| water_use         | water_use_litres         | Yes            |
| activity_duration | activity                 | Yes            |
| activity_duration | average_duration_minutes | Yes            |
| activity_duration | average_duration_hours   | No             |

## 2. Practise combining datasets

- 3) The next stage of the joining process is to decide what type of join we need to use.  
We are going to use INNER JOIN. Explain why this would be a good choice to solve this problem.

Inner join is a good choice because we need water\_use\_litres and average\_duration\_minutes to calculate the average water use per minute. Therefore we are only interested in activities that have both pieces of information that we need for the calculation.

- 4) Fill in the missing gaps in the pre-joining checklist.

What is the key column?

activity

Are the data items in the key column(s) the same data type?

Yes

Are there any duplicate rows?

No

How many rows do you expect in your final dataset?

8

How many columns do you expect in your final dataset?

3

Do you expect to see any gaps/missing items in your final dataset?

No

- 5) Now, combine the datasets based on the information above and paste the final dataset below.

| activity                          | water_use_litres | average_duration_minutes |
|-----------------------------------|------------------|--------------------------|
| Shower (10 minutes)               | 80               | 10                       |
| Bath                              | 120              | 30                       |
| Brushing Teeth (With Tap Running) | 5                | 2                        |
| Brushing Teeth (With Tap Off)     | 0.5              | 2                        |
| Hand Washing (With Tap Running)   | 5                | 2                        |
| Dishwashing (Hand)                | 30               | 30                       |
| Dishwashing (Dishwasher)          | 15               | 60                       |
| Toilet Flush (Full)               | 6                | 1                        |

- 6) Enter a formula in the cells E96 to E103 to divide the 'water\_use\_litres' by 'average\_duration\_minutes' to work out the how much water is used per minute for each of the activities.

| activity                          | water_use_litres | average_duration_minutes | water_use_per_minute |
|-----------------------------------|------------------|--------------------------|----------------------|
| Shower (10 minutes)               | 80               | 10                       | 8.0                  |
| Bath                              | 120              | 30                       | 4.0                  |
| Brushing Teeth (With Tap Running) | 5                | 2                        | 2.5                  |
| Brushing Teeth (With Tap Off)     | 0.5              | 2                        | 0.3                  |
| Hand Washing (With Tap Running)   | 5                | 2                        | 2.5                  |
| Dishwashing (Hand)                | 30               | 30                       | 1.0                  |
| Dishwashing (Dishwasher)          | 15               | 60                       | 0.3                  |
| Toilet Flush (Full)               | 6                | 1                        | 6.0                  |

- 7) Which activity uses the most water per minute?

Shower

## 2. Practise combining datasets

---

### 3. More practise combining datasets

#### Section 3.1 (Apply)

Across Scotland, there are 10 weather stations that have been collecting data such as the amount of rain and number of hours of sunshine for a number of years.

| Location     | YearOpened |
|--------------|------------|
| Braemar      | 1959       |
| Dunstaffnage | 1972       |
| Eskdalemuir  | 1914       |
| Leuchars     | 1957       |
| Lerwick      | 1930       |
| Nairn        | 1931       |
| Paisley      | 1959       |
| Stornoway    | 1873       |
| Tiree        | 1928       |
| Wick Airport | 1914       |

[https://en.m.wikipedia.org/wiki/File:Caim\\_Gorm\\_weather\\_station\\_2.jpg](https://en.m.wikipedia.org/wiki/File:Caim_Gorm_weather_station_2.jpg)

You need to find the dates and locations for the maximum temperature, minimum temperature, most rain and most sun in hours from these weather stations.

|                        | location | date | value |
|------------------------|----------|------|-------|
| Maximum temp           | ?        | ?    | ?     |
| Minimum temp           | ?        | ?    | ?     |
| Most rain (mm)         | ?        | ?    | ?     |
| Most sun (total hours) | ?        | ?    | ?     |

There are two datasets that have been loaded into Power Query for you to use,

|                           |   |
|---------------------------|---|
| <b>LEFT</b> dataset name: | <b>weather</b>  |
| Description:              | Data from the historical weather stations across Scotland.        |
| Number rows:              | 9412  |
| Number columns:           | 8   |
| Duplicates:               | None  |
| Missing values:           | Yes: max_temp, min_temp, rain_mm and sun all have missing values. |

|                            |  |
|----------------------------|--|
| <b>RIGHT</b> dataset name: | <b>lat_long</b>  |
| Description:               | Names and locations of the weather stations across Scotland. |
| Number rows:               | 9  |
| Number columns:            | 3  |
| Duplicates:                | None   |
| Missing values:            | There are no missing values.                                 |

- 1) Using the information you know about the datasets and the problem you are trying to solve. Fill in the joining checklist:

You will be using a **LEFT** join for this problem.

What is the key column(s)?

lat, long

Are the data items in the key column(s) the same data type?

Yes

Are there any duplicate rows?

No

How many rows do you expect in your final dataset?

9412

How many columns do you expect in your final dataset?

9

Do you expect to see any gaps/missing items in your final dataset?

Yes

### 3. More practise combining datasets

- 2) Left join the datasets then sort the final dataset to fill in the gaps in the table below.

|                        | location    | date   | value |
|------------------------|-------------|--------|-------|
| Maximum temp           | Paisley     | Aug-95 | 22.7  |
| Minimum temp           | Braemar     | Jan-63 | -8.6  |
| Most rain (mm)         | Eskdalemuir | Dec-15 | 568.8 |
| Most sun (total hours) | Tiree       | May-75 | 329.1 |
